

Making Money Fast With Pay Per Install Programs

By Hacker2012

 *This eBook is meant for free distribution; if you paid for this I'm extremely sorry and hope you find some way to get your money back. Feel free to redistribute this eBook as you see fit, give it to your friends so that they may have the same financial freedom that you do. Just don't edit this book, or charge for it, or we'll have a problem 😊

Introduction

There are literally hundreds of Pay Per Install (PPI) Programs out there. And essentially all they do is pay you for installing their software onto other people's computers. Some of them allow you to bundle an executable (exe) file onto another piece of software. Some of them want you to use a gateway on your website, or an ActiveX control. Some of these programs install malicious scripts/spyware onto an unsuspecting user's computer, while some of them install a simple toolbar, or some other non-malicious piece of software. I'm not going to go into the morale debate about installing software on people's computers, or whether or not program X is ripping off affiliate marketers. What I'm going to do is simple; I'm going to teach you the top used techniques by PPI marketers. Tell you a program that I trust and that has paid me in the past, and show you how to implement these techniques into your daily work plan for massive profits in a short period of time. Some of what is presented here may scare you, you may hate me for doing it, but I guarantee you'll be tempted to try it. I wish you all luck in your PPI endeavors and hopefully you will be as successful as I have been.

About Me

👉 I go by many different names in many different online communities. What you need to know about me is this; I've been doing internet marketing for a few years full time. In the past year I started pushing PPI programs very hard. Within my first month doing PPI I was breaking close to \$300 per day, and continue to make at least this much on a daily basis now. With the effects of viral file sharing my profits only grow week over week, month over month, and I've installed my bundled exes on over a half million end users machines and counting. I would like to say I'm one of the best, but this is by far a lie. You will hear stories of people that can push a few hundred thousand dollars worth of installs in a month. They are the best, me I make pennies in comparison, but I still probably make more than you. But don't worry, that won't be so for much longer.

The Companies

► There are a lot of PPI companies out there but truthfully most of them aren't too good. I've been banned from many for doing things that weren't even against their TOS. So for the Initial version of this Ebook I'm going to recommend just two companies as they've been very good to me.

LoudMo

► LoudMo allows anyone to join, they pay up to \$1.50 per install, and are pretty great overall. Plus they have a no hassle signup process where you can get started in seconds. However I prefer....

Welcome to our affiliate program

► LoudMo affiliates are now automatically eligible to earn 33 percent higher commissions on all Tier 1 downloads every Thursday, one of the Web's most trafficked days of the week.

► Costa Rica - LoudMo (www.loudmo.com), the Web's leading pay-per-install (PPI) affiliate program, today introduced its \$2.00 Thursdays program. LoudMo affiliates are now automatically eligible to earn 33 percent higher commissions on all Tier 1 downloads every Thursday, one of the Web's most trafficked days of the week. The new program, paired with its already generous payout structure, have made LoudMo the unrivaled and highest paying PPI affiliate.

► LuodMo gives affiliates four ways to add real value to their web publishing venture including free downloadable products already popular with a broad range of audiences. LoudMo's download product demand is high due to each program's overall value, development quality, existing brand visibility and practicality. Products are also easily installed, with no personal data collected or shared with outside parties.

- "We're thrilled to launch our \$2.00 Thursdays program, reaffirming our commitment to delivering the highest affiliate payouts on the Web," states Rocco Buzzese, President of LoudMo. "The program has been designed to seamlessly align with any publisher's existing website engagement strategies by leveraging one of the Internet's most active browsing days. No other PPI compensation plan comes close, with our top affiliates slated to boost earnings by thousands of dollars every single Thursday as a result." The LoudMo product suite includes:
 - **The FLV Player.** This free media player is small in file size and downloads quickly to allow streaming MPEG-4 and Flash (FLV) video viewing on your desktop. Gateway Content Protection. This free and easy-to-install gateway page application pauses visitors after they have read a content teaser and requested access to the full story. Before advancing, the visitor is prompted to download LoudMo products.
 - **BabelFish.** This free web-based tool developed by AltaVista supports single-click translation for full web pages, blogs, Word, PDF or text documents using 75 major world languages.
 - **Chameleon Tom.** This free Facebook application enables background, layout and color formatting changes to suit one's unique personality.
 - **GameBound.** Free online games are more popular than ever, take advantage of the free online flash game craze by promoting GameBound today. Affiliates will generate huge profits from our pay per install compensation method easily earn cash every time a unique user downloads the GameBound Game Pass!
- For more information about LoudMo or its downloadable product suite, visit <http://www.LoudMo.com> or call 1-866-992-6734.
- **About LoudMo:** LoudMo is the Web's leading pay-per-install (PPI) affiliate program founded on the principles of trust, honesty and

reliability. The company's management team brings more than 15 years of experience in sophisticated toolbar and product download technology. Continually driven to be the first choice in PPI, LoudMo empowers its affiliates with higher payouts, quality products, simple revenue-generating solutions, detailed performance metrics and reports, superior customer service, marketing tools and a powerful and profitable referral program.

Technique #1

Pirate Rape, or a quick lesson on why you should pay for your software.

-  **Summary:** Download popular smile file sized torrents, bundle your executable with the original, and reupload to the torrent sites.
-  **What's Covered:** Finding popular downloads, Bundling an executable with iexpress, and creating new torrents with uTorrent.
-  **What's not covered:** Using Winzip/Winrar, bittorrent basics, explaining to friends and family where the money came from.

Detailed Guide to Technique #1:

- » Have you ever wondered why you should legitimately pay for your software instead of simply getting it off of a torrent site, or any p2p network for that matter? Well the reason is people like me, and soon to be people like you. Alright so here's a technique that will easily make \$100 a day in less than 48 hours of use. The first thing we need is any bittorrent client, I recommend a piece of software called [uTorrent](#) for this one. This can be downloaded here: [uTorrent](#)

- » I'm not going to go over installation of [uTorrent](#) in this tutorial but I will go over the more advanced usages later.
- » What we are going to do is find out what's popular today in the way of illegitimate file downloads, bundle it with our executable file so that they never know what hit them, and sit back and collect the rewards. The first step is market research. We need to figure out what exactly is hot right now on the torrent sites, and who better to tell us than the torrent sites themselves!

- » So follow this link: <http://www.mininova.org/yesterday/>

And it will show you the most popular torrents of yesterday on mininova, arguably the largest bittorrent tracker on the net. Now if you scroll down on that page you will find the software section, excellent I know. Our target is going to be software applications under 20megabytes in size, with a decent number of seeders/leechers still(say 50 in either spot and it's probably worth it)

Download every single one of these applications, as you do create a text file for each that includes the description the original listing had, we will need this later and you don't want to have to search for it.

- 👉 Once you have all these applications downloaded, go through and unzip/unrar them just make sure each one is in its own folder not compressed. No need to install them, just get each ones files into its own folder decompressed.
- 👉 **Warning:** Simply download The FLV Player or BabelFish or Chameleon Tom or GameBound, DO NOT OPEN THE FILE. This file is for spreading to other people and not yourself !

Download it into a new folder, I named mines PPI and placed it on my

Click Start → click Run → type in “iexpress” without quotations

Select: Create New Self Extraction Directive File

Push next

Select: Extract Files and Run an Installation Command

Push next

Type anything you want in the title, this will not matter on anything, I like to type in one letter like a simple t, as this takes less time and I don't like to waste any

Push next

Select: No Prompt

Push next

Select: Do Not Display a License

Push Next

Now on this following screen you'll want to add 2 files. The first being the first executable you're going to bundle, so pick one of those applications you downloaded and select the exe file. The second being your bundle installation file given to you by the PPI company. After adding both...

Push Next

Under the Install Program section, select your bundle exe given to you by your PPI Company.

Under the Post Install Command, select the exe from the application you downloaded.

Push Next

Select: Hidden

Push Next

Select: No Message

Push Next

This next screen allows us to name the output executable, which is going to be our install file, bundled with the file you downloaded. I recommend naming it something close to what the applications exe was originally named. So if you downloaded winrar-keygen.exe just name it that. Then you need to select the option: "Hide file extracting progress animation from User"

Push Next

Select: No Restart

Push Next

Select: Don't Save

Push Next

Push Next

- 👉 Wait for your new bundled file to be created and we're almost done 😊
- 👉 Once your new exe is created, replace the original application's exe in its folder with the new one you just made. I recommend recompressing the folder into a .zip or .rar using winrar/winzip so that its file size is slightly smaller, and it can be more easily utilized in Technique #2.
- 👉 Now once you've got it compressed into one file, go into uTorrent, and select File → Create New Torrent
- 👉 Click Add file and select the newly made .rar/.zip file that contains your bundled exe. Under trackers place the following:

<http://open.tracker.thepiratebay.org:80/announce>

<http://open.tracker.thepiratebay.org/announce>

<http://tpb.tracker.thepiratebay.org/announce>

<http://tpb.tracker.thepiratebay.org:80/announce>

- 👉 Now Select Start Seeding, and click Create and Save As. I usually just give the torrent the name of my zip file, which is usually about the same as the original torrents name.
- 👉 Once the Torrent is created you can login to the various torrent sites and upload it, I won't go too in depth on this last part as its pretty self explanatory, but I will walk you through how to do it on mininova.org

just so you can get a feel, although I recommend uploading it to many other torrent sites as well so it gets more exposure.

- From mininova.org select upload (near the top of the screen)

And fill in all the information about the torrent you are going to upload. Remember how I said you should save the info from the original post? Well here's your chance to use it again to quickly fill out all the torrent info. Just be sure and remove the original uploader's name if he did a little claim to fame in the description. For the torrent file you need to select the .torrent you created with uTorrent and then simply click upload. Now just leave uTorrent running and listen to the sound of thousands of people doing this.

- Additional notes:** Be sure to do this with multiple files, uploading one file might make you a few dollars a day, but if you're on a roll you can upload well over 100 in a solid 8 hour work day.
- Advanced notes:** look into using proxy's to upload, eventually certain trackers may catch on to what you're doing and ban your ip address, or invest in dialup to quickly generate new ips on the fly. Hell even change your ip between every few uploads. This way they can't easily link them all together and take down all your torrents at once.

Technique #2

Pirates live on the high seas, so why not just have sex with your peers instead.

- 👉 **Summary:** Share popular files on p2p networks after a bundle, why work when you can sleep!
- 👉 **What's covered:** p2p network usage as a money maker, making money while you sleep
- 👉 **What's not covered:** p2p basics, explaining to friends and family where the money came from.

Detailed Guide to Technique #2:

- 👉 Seeing as everyone shares and downloads little programs from p2p networks its best that we expand our little PPI Empire to include them. Now it's best if you share across several networks to get maximum exposure. So I recommend you look into/download the following programs:

Shareaza

Ares

Limewire

Kazaa Lite Resurrection

- 👉 The combined 4 should give your files plenty of exposure. All you have

to do once they're installed is simple, share the folder that all those .rar/.zip files you made in the last technique are in and viola. After a few weeks of making 10-20 torrent files a day you should have a huge library of software to share, and should be making at least an additional \$30-50 daily by simply having these programs run in the background. Plus as more people download these files the more exposure they get. So they gradually get downloaded more and more and more. It's so damn simple it isn't even funny and you will be making the big bucks in no time.

Technique #3

Wait, so other people will work for me, without knowing it?

- **Summary:** Generate hundreds of files a day on full autopilot using mIRC.
- **What's Covered:** Setting up mIRC to auto generate new installation files
- **What's not covered:** p2p basics, mIRC basics, explaining to friends and family where the money came from.

Detailed Guide to Technique #3:

- Alright so you somehow implemented the above two techniques while reading them and you're still money thirsty. Good PPI companies rely

on people like you and me so they want us to be money hungry like that.

☞ This is a sweet little technique to automatically copy and rename one file with the name of hundreds of other popular files. So our first step is to download a little chat program called mIRC which can be gotten here: [mIRC](#)

☞ Once you have mIRC installed you want to go into it and press ALT + R at the same time. Under the tab remote copy and paste the following:

```
on 1:TEXT:*!search*:#serialz:/copy setup.zip $replace($2-,chr(32),-) $+  
.zip | /copy setup.exe $replace($2-,chr(32),-) $+ .exe  
on 1:TEXT:*!serial*:#serialz:/copy setup.zip $replace($2-,chr(32),-) $+  
.zip | /copy setup.exe $replace($2-,chr(32),-) $+ .exe
```

☞ Now go into the following folder on your hard drive

C:\Documents and Settings\Your User Name\Application Data\mIRC\

In this folder you want to place two things, your bundle installation file, which you will name setup.exe

And that same file inside of a .zip file which you will name setup.zip accordingly

☞ Now in mIRC at the top go to:

Tools → options → and on the left under Connect, Select Servers.

👉 Click Add for description type in something memorable

And under IRC Server type in: irc.efnet.org

👉 Now it should appear in the list of servers with the description you gave it, double click this and click connect.

👉 Once you're connected to the server it should prompt you for a channel. Type in #serialz and hit join. Now just leave this running and whenever someone searches for a file it will automatically copy setup.zip and setup.exe and rename them to the file people searched for.

👉 Final Steps

Now all you need to do is share the mIRC folder on the p2p networks and over the course of a few days you should generate thousands of the top searched for files, all of which are just your exe renamed.

When people search for them and download them on the p2p networks they'll find your files and get them instead!

👉 Viola easy money 😊

Conclusion

👉 All I'm asking of each and every one of you guys who read this is to give these techniques a try. I guarantee that if you spend one long day working on this you will see the results you're looking for and continue to put the time in day after day for increased profits. This is the easiest and quickest money you will ever make on the net and I see no reason why all of you can't achieve your financial dreams from this eBook. So stop sitting around and waiting for that million dollar idea, stop forking money over to retard who charge out the ass for outdated techniques in a three page eBook and just read this once, implement the techniques and sit back and watch the results. If you're not happy with them I'll give you your money back, well actually I won't because this is a free report but I'll be amazed if you don't see good results from one solid day of implementing my three techniques. So seriously just put one solid day into the first three techniques listed(that's one day total!) and you should see those results you've all been looking for. Oh and one last thing, if you want to stay updated on new techniques, hot PPI programs, or you just want some help, shoot me an email over to:

suhail1c2@gmail.com

Which will then forward your emails to my real account, where eventually I'll try and get back to you, as well as send you a link to my mailing list.
