Tim Bekker introducing Copycat Sites...

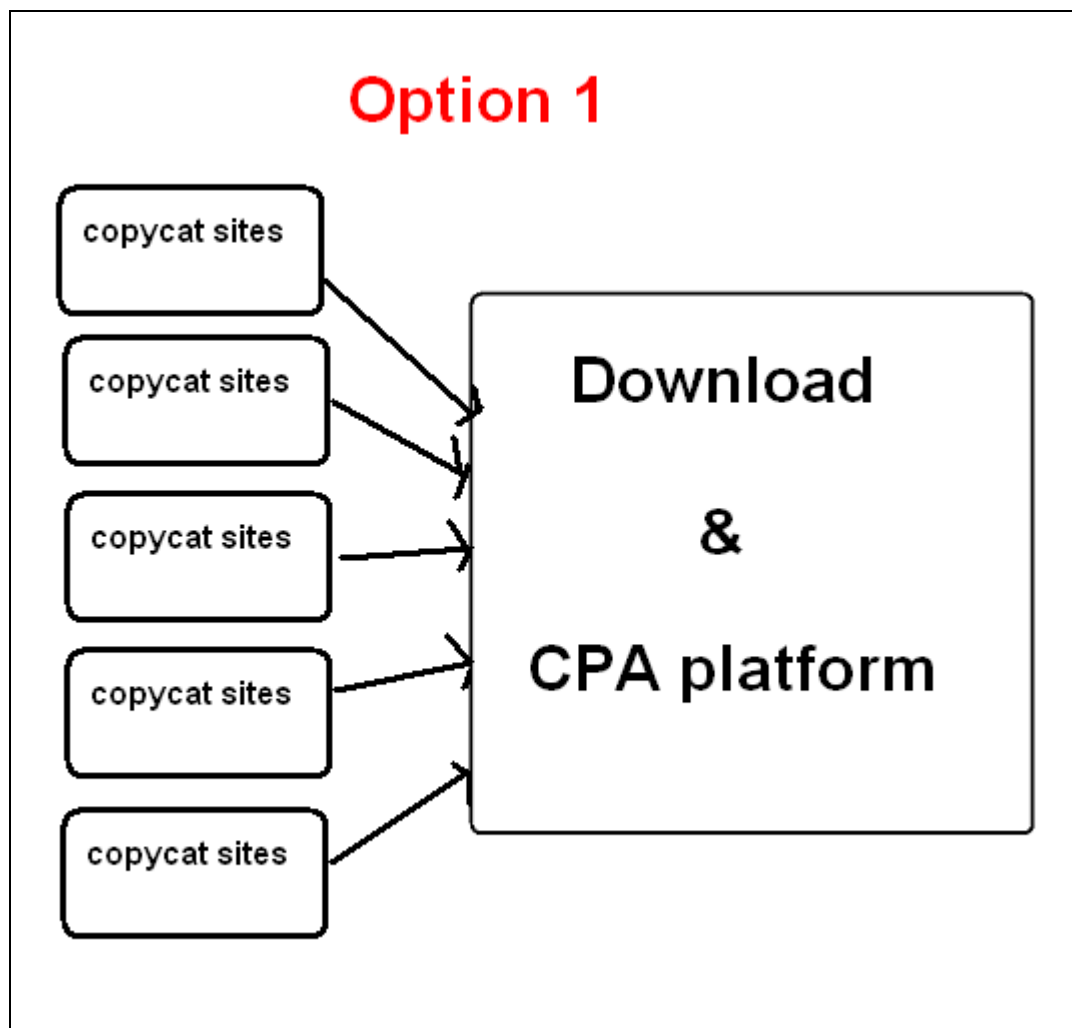

EXTRA

Index
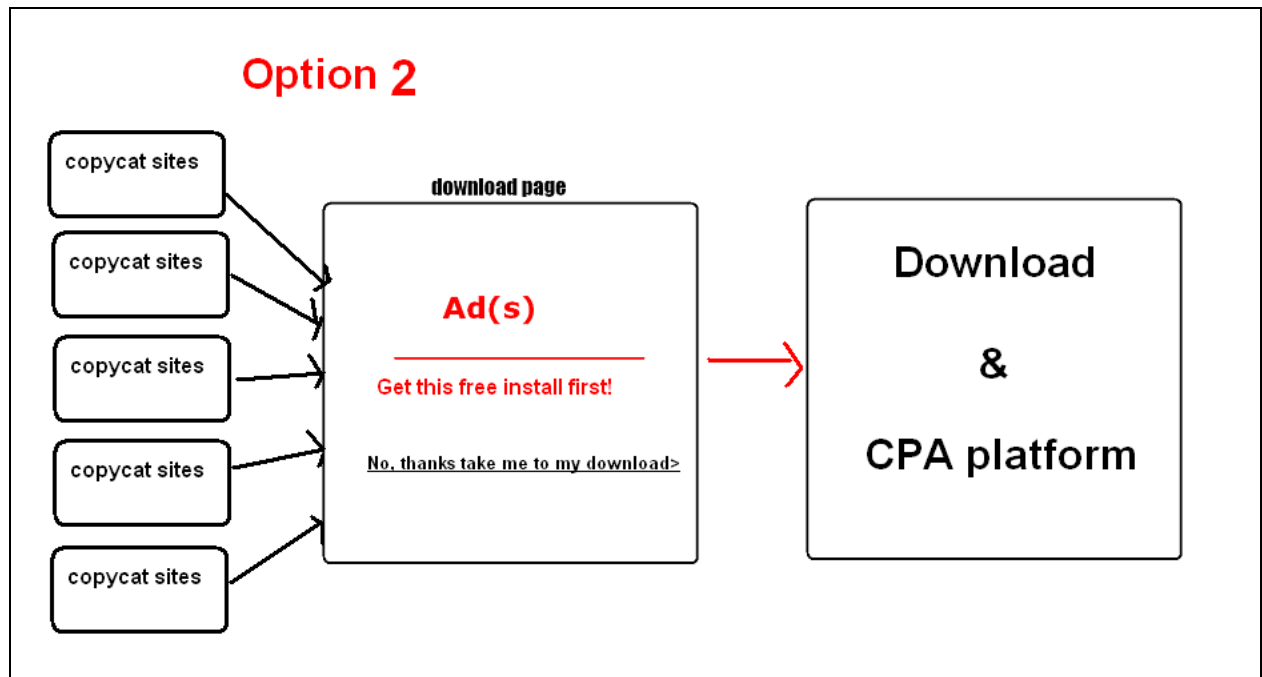

<mark>Introduction</mark>

This is special EXTRA report for those who bought the dMayBelfire.com download and CPA Offer Platform. I have left most information that is already in the "Download Page" blueprint out. Please advise that blueprint if you can't recall some parts in this blueprint.

The dMayBelFire Download Page Concept

There are basically 2 ways you can go:

- You can link all copycat sites directly to your Download & CPA platform. Be sure to have all right programs uploaded in your platform. You don't want any angry customers :)

- You can use the download page again before you send them to the Download & CPA platform to force your traffic to go through one of your money making offers (or simply put: ads) first.

Option 1

copycat sites

copycat sites

copycat sites

copycat sites

copycat sites

Download

&

CPA platform

You can use the same download page templates for this (the ones that come with the package)

Ok guys. Option 1 is by far the nicest solution and your customers will love you for instant access to such an amazing free platform.

Unfortunately I have to say that option 2 will simply make you more money. If you executed all steps that I described in the Blueprints series than 1000's of visitors per month will go through your download page ads…you get the point I guess.

Creating your dMaybelfire Download Pages

There is not really a big difference between the download pages with the Download & CPA platform. You can keep them exactly the same. Just be sure that you link the program name next to the download button now to your platforms domain instead of to the "installer" location.

If you work with one download page to link all your copycat sites to you can also work with a more descriptive text like:

No, thanks take me to the free download page>>
